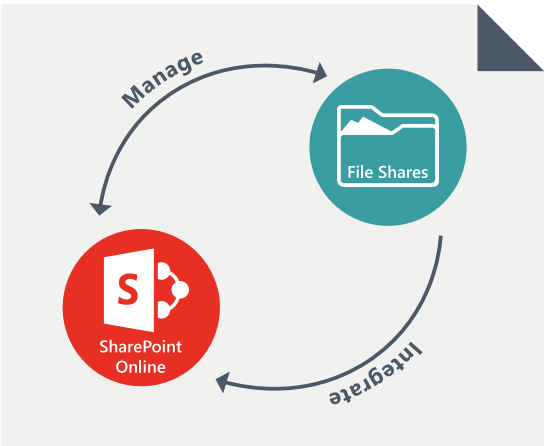
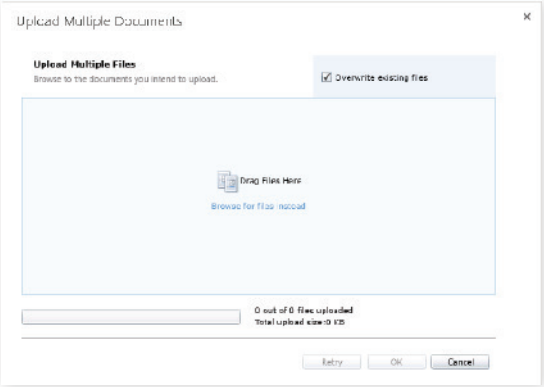
Technical Overview

Integrate File Shares into Office 365 SharePoint Online

Surface local file share content in Microsoft® SharePoint® Online, and OneDrive for Business environments without migration, enabling seamless collaboration with a single point of access.

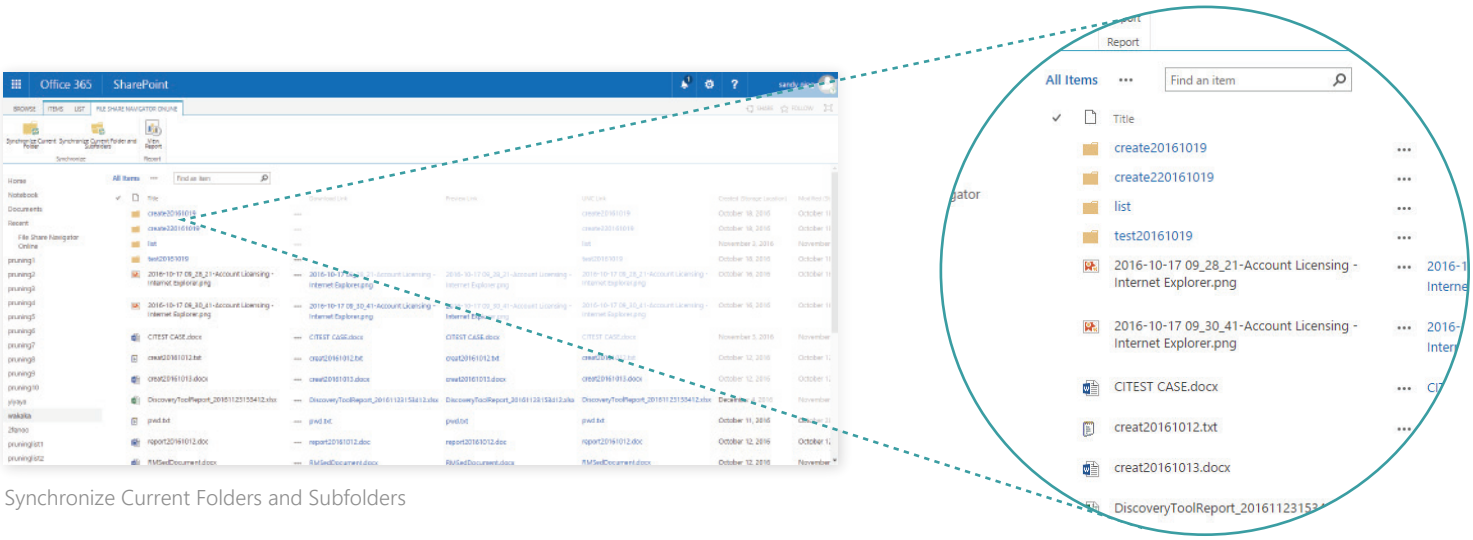




Upload Multiple Files

Surface File Share Content in SharePoint Online and OneDrive for Business without Migration

- **Connect UNC-Accessible File Share Folders with SharePoint Online and OneDrive for Business** - Expose file share content as items in a File Share Navigator Online list, allowing users to access, download, and view file-based content through SharePoint Online and OneDrive for Business without migration.
- **Automatic Metadata Assignment** - Automatically add metatags to specified files during the synchronization from net shares to SharePoint Online with a customizable CSV file.
- **Direct Uploads/Downloads** - Users can download surfaced file share content and easily upload individual or groups of local files into the connected file share folder directly from within SharePoint Online and OneDrive for Business without a VPN connection.
- **Support Large Files** - Surface files larger than native limitations in SharePoint Online and OneDrive for Business to consolidate access to all enterprise-wide content.
- **Access all Unsupported File Types** - Allow end users to browse for and access all enterprise content – including Microsoft Access data, .exe and .irm files, and Excel Share books – natively unsupported by SharePoint Online.
- **Metadata-Based Search** - Utilize SharePoint Online's full metadata-based search across all enterprise content, including content residing in file shares.
- **On-Demand/Scheduled Synchronization** - Enable automatic synchronization on a configured schedule or manually synchronize on-demand to continually ensure source and destination environments have the most up-to-date content.
- **Co-Authoring in Office 365** - Allow multiple users to collaborate on file share content in real time within Office Online apps including Word, Excel, and PowerPoint. Eliminate duplicate local copies and have changes immediately applied to documents.



Synchronize Current Folders and Subfolders

Lightweight Installation and Management

- **Easy to Install and Deploy** - As part of AvePoint Online Services – the industry's first and only 100% Microsoft Azure-based Software-as-a-Service (SaaS) platform for Office 365 – installing File Share Navigator Online requires no additional hardware, deploys as an app added into your SharePoint Online site, and requires no Microsoft External BLOB Storage (EBS) or Remote BLOB Storage (RBS) API configuration.
- **Centralized Interface to View and Manage Lists** - Provide end users with a centralized interface to view and manage all the connected File Share Navigator Online lists within their allowed permissions, displaying configuration details such as list name, list URL, source UNC path, and sync schedule.
- **Job Monitor** - Monitor all sync jobs by viewing details – including list URL, net share path, the user who triggers the sync job, job status, job time, number of failed or successfully synchronized or deleted files, number of users that are not mapped in SharePoint Online, and file locations on both net share and SharePoint Online – in the Job Monitor.
