## Complete Anti-Malware Protection for Microsoft SharePoint

Diligently protect mission-critical Microsoft® SharePoint® platforms from viruses, worms, rootkits, and Trojan horses. DocAve Antivirus for SharePoint, powered by AvePoint-preferred antivirus provider Trend Micro, is the industry's most comprehensive and cost-effective solution for protecting SharePoint 2007 and SharePoint 2010 environments from malicious content.

- Fully integrated into Microsoft SharePoint Central Administration interface
- Real-time, event-based scanning ensures malware is identified and quarantined before reaching the SQL database
- Protect pre-existing content with scheduled and incremental scanning

## Business Advantages

- **Total Protection for Mission-Critical Assets**  
Comprehensive, real-time antivirus protection for your entire Microsoft SharePoint 2007 and 2010 platforms mitigates risk of productivity loss and security breaches.
- **Seamless Integration into Existing Antivirus Strategies**  
DocAve Antivirus is powered by preferred antivirus provider Trend Micro's antivirus scan engine and Smart Protection Network™.
- **Cost-Effective Anti-Malware Protection**  
Lower the cost barrier for delivering best-in-class protection from malicious content entering your SharePoint environment by leveraging AvePoint's per-server licensing model.

## Part of a Comprehensive SharePoint Antivirus Solution

DocAve Antivirus for SharePoint is one of several DocAve tools that enable the complete protection of SharePoint environments from viruses, worms, rootkits, and Trojan horses:

- DocAve Content Shield for SharePoint – Scan all content prior to upload to ensure proactive compliance

\*As with all AvePoint software, the DocAve Software Platform leverages only fully supported Microsoft methodologies and API's.

## Complete Anti-Malware Protection for Microsoft SharePoint

- Ships with preferred antivirus provider Trend Micro's scan engine and Smart Protection Network™
- Real-time and scheduled scanning of all SharePoint content for malicious code, including viruses, worms, rootkits, and Trojan horses
- Quarantine based outside of SQL with full review access via SharePoint's Central Administration interface allows for both secure platform protection and efficient resolution following the discovery of malicious content
- Full integration into SharePoint Central Administration provides for efficient and unified solution management across your entire Microsoft SharePoint farm
- Automatic scan of all similar and versioned content upon identification of malware event, verifies integrity of all previous item versions
- Set customizable email notifications when a quarantine event occurs, for rapid review and response to potential threats
- Incremental database scans provides extra level of business security while optimizing system resources

### **Supported Environments**

*Microsoft SharePoint Server 2010*

*Microsoft SharePoint Foundation*

*Microsoft Office SharePoint Server 2007*

*Windows SharePoint Services v3*
