True SharePoint Redundancy to Ensure 24x7 Fault Tolerance

According to the National Archives & Records Administration, 50% of companies that lost their data center for more than 10 days due to a disaster filed for immediate bankruptcy.

DocAve High Availability addresses the need for a critical 24x7 fault tolerance solution for Microsoft® Office SharePoint® Server (MOSS) 2007, Microsoft Office SharePoint Portal Server 2003, SharePoint 2010 and Microsoft Windows® SharePoint Services (v2, v3).

The elegant and intuitive DocAve user interface enables centralized control for all your SharePoint environments from a single interface. The DocAve High Availability solution is the first “one-switch” disaster recovery tool designed for Microsoft SharePoint Products and Technologies. It is quickly deployed, simple to use, and provides customers with immediate access to a stand-by SharePoint environment when needed.

Business Advantages

- Limit service interruptions and data loss to satisfy the most aggressive SLA's and ensure business continuity
- Minimal data loss provides seamless recovery of data and mitigates worker productivity-loss
- Flexible content mirroring eliminates geo-distance constraints, allowing you to implement standby environments in any datacenter around the world
- Centralized browser-based interface allows you to safeguard ALL SharePoint farms in your environment from a single interface
- Guarantee SharePoint stability and increase end-user trust in the system to accelerate deployment adoption and return on investment

*As with all AvePoint software, the DocAve Software Platform leverages only fully supported Microsoft methodologies and API's.

DocAve High Availability Technical Advantages

- Ensure continuous access to your SharePoint environment through flexible content mirroring
- User-friendly Web-based interface offers SharePoint centric tree-mode viewing during high availability planning and “one-click” access to bring a stand-by environment “online” during disaster recovery
- Easily and quickly access your stand-by environment with a simple DNS switch
- Minimize downtime by creating custom one-click failover plans, accessible via the STSADM command line tool, so there’s no need to log into DocAve to kick off the failover
- SharePoint-aware replication of content databases or Web applications performed continuously in real-time or on a scheduled basis
- Scheduled job processes designed to run 24x7 without database or index lockups
- Industry-strength data-packet level fault tolerance ensures reliable, full fidelity data replications over noisy networks
- Full or incremental replication options leverage SQL Server mirroring or log-shipping for minimal data loss
- Optional offline synchronization allows content to be synchronized to the Stand-By Server via a flat file
- Optional compression and throttle control settings allow for control of network traffic and further enhance low-bandwidth replication
- Graphical dashboard displaying real-time statuses of synchronization jobs for all content databases
- True redundancy achieved through SQL mirroring and optional integration with DocAve Backup and Restore module
- Can be distributed across servers to increase solution scalability and minimize performance impact

Supported Environments

Microsoft SharePoint Server 2010
Microsoft Office SharePoint Server 2007

Microsoft SharePoint Foundation
Windows SharePoint Services v3

How to Buy DocAve
