

Administrator

Migrate. Integrate. **Manage**. Optimize. Protect. Report.

Manage. Simplify implementation, management, and enforcement of Microsoft® SharePoint® 2010 governance policies with unmatched control over SharePoint content, configurations, and security.

Key Benefits

- Improve operational efficiency and IT productivity by centralizing settings, configurations, and security for robust discovery, search, and management throughout SharePoint environments
- Reduce costs associated with managing complex infrastructures by simplifying the implementation and enforcement of SharePoint security and configuration policies
- Enhance SharePoint security and compliance through the standardization and enforcement of organizational policies for content provisioning and access management

Simplify the implementation and enforcement of SharePoint security, configuration, and provisioning policies.

Single Interface: Universal Control over Enterprise-wide Environments

DocAve Administrator for SharePoint 2010 helps simplify the implementation and enforcement of SharePoint governance policies for object provisioning, access controls, and asset configurations. Through a highly intuitive user interface, SharePoint administrators can easily manage settings, configurations, and security policies across any SharePoint object level. Rule-based searches within or across SharePoint environments quickly identify SharePoint assets and implement configurations or security changes to the search results selectively or in bulk, reducing overall management complexity.

Technical Overview

- Perform all SharePoint administrative functions across multiple web applications and farms at any SharePoint object level from a unified interface
- Simplify security, configuration, and content provisioning policy implementation and enforcement with policy-based controls
- Manage configurations, security, solutions and features globally with easily defined groupings of sites or farms by the type of environment, physical location, or business function
- Simplify selection of SharePoint objects with rule-based search of SharePoint assets and rule-based user security search within or across SharePoint farms
- Schedule all administrative functions for either the entire environment, or particular components, to avoid business disruptions associated with policy implementation or enforcement
- Manage and update (edit, clone, transfer, or delete) user security, including deactivated or deleted AD accounts, across multiple objects at all levels from both user- and SharePoint- centric perspectives
- E-mail, capture, and archive all administrative actions for real-time alerts, on-demand review, or to satisfy compliance or audit requirements

Perform all SharePoint administration functions at any object level leveraging intuitive wizards or forms.

As with all DocAve products, DocAve Administrator for SharePoint 2010 leverages only fully supported Microsoft methodologies and APIs.
