

AvePoint Releases the Industry's Most Comprehensive Microsoft SharePoint Platform Management Software

DocAve 4.5 software platform, officially released on January 2nd, represents the industry's first fully-integrated suite of data protection, administration, compliance, and migration solutions.

JERSEY CITY, NJ, February 5, 2008 — AvePoint, an industry leader in enterprise-strength data protection and management for Microsoft SharePoint, has released version 4.5 of their award-winning DocAve product suite. The new version further enhances the existing suite of backup, disaster recovery, and migration software solutions and introduces several new modules, making DocAve the most powerful and comprehensive SharePoint Platform management system on the market today.

New DocAve modules cover centralized administration, compliance, and migration, and address numerous pain-points in the management of Microsoft Office SharePoint Server 2007, SharePoint Portal Server 2003, and Windows SharePoint Services versions 2 and 3.

"Corporate dependence on Microsoft SharePoint as the principal document repository and collaboration platform has made it crucial for IT management to be able to centrally manage and control their rapidly growing yet dispersed environments," said Errin O'Connor, Founder and CEO, EPC Group. "Our enterprise customers are constantly looking for reliable tools to be able to easily modify SharePoint settings, permissions, and securities. They will immediately recognize the tremendous value of DocAve 4.5 as an all-in-one software platform for their SharePoint management needs, whether it's data protection, disaster recovery, or centralized administration."

DocAve 4.5 product suite provides Enterprise Administrators with all the functions needed to successfully protect and manage SharePoint. DocAve 4.5 covers the following functional areas:

- **Backup & Recovery:** DocAve data protection modules ensure minimal downtime, virtually no data loss and even continuous data availability during a disaster. DocAve allows for fast recovery of documents and sites with its full-fidelity item-level Backup and Restore, as well as complete recovery of the entire system with the Platform Recovery module, the only solution of this kind available on the market today.
- **Administration and Replication:** DocAve gives you complete control over your SharePoint environments, from a single farm to hundreds of farms, and truly centralizes the administration of what is rapidly becoming a mission-critical information and collaboration platform. It provides a holistic view into a sprawling enterprise-wide SharePoint deployment while providing valuable reports on environment configuration and system health. It also allows administrators to easily search, manage, and replicate configuration, securities, and content across all SharePoint assets.
- **Compliance:** DocAve is specifically designed to demonstrate effective coverage of even the most stringent legal and regulatory requirements for all your SharePoint assets. Organizations can manage their SharePoint content with complete confidence, storing records and audit data, enforcing retention policies, and assuring that regulatory policies are being followed.
- **Migration to SharePoint 2007:** With DocAve, administrators can easily perform seamless, full-fidelity content migration to Microsoft Office SharePoint Server 2007 and Windows SharePoint Services version 3. It supports selective migrations from Microsoft SharePoint 2001/2003, Documentum eRoom, Microsoft Exchange Public Folders and File Systems. This allows the co-existence of multiple platforms as businesses migrate selective contents incrementally into the MOSS 2007.

"The best defense against major data loss or loss of enterprise-wide control is proper planning and deployment. DocAve Software is absolutely essential to prevent downtime, financial losses, or costly legal expenses caused by human errors,

hardware failure, or even disaster events within enterprise SharePoint environment,” said TJ (Tianyi) Jiang, Chief Operating Officer, AvePoint. “DocAve’s true integration of all back-end SharePoint management components within a single distributed software platform results in the most complete set of SharePoint tools available on the market today.”

The combination of industry leading technologies, such as backup and recovery, administration, replication, compliance and migration, within one DocAve Software Platform embodies AvePoint’s unique approach to SharePoint Server backend management, and continues the expansion of AvePoint’s award-winning product line.
