

AvePoint Introduces New Features for SharePoint Management, Protection, and Custom Application Support with DocAve v5.7

AvePoint's latest product release – fully supporting SharePoint 2010 SP1 – offers support for rapid backup and restore as well as third-party custom SharePoint applications

Jersey City, NJ — July 21, 2011 — AvePoint, a proven leader in providing [lifecycle management software](#) solutions for Microsoft SharePoint, today announced the latest release of its flagship solution, DocAve Software Platform v5.7, provides full support for SharePoint 2010 Service Pack (SP)1 – including its enhancements to Remote Binary Large Object Storage (RBS) – as well as rapid restore of lost or corrupted content and enhanced data protection support for other custom SharePoint Applications.

“For the last 10 years, AvePoint has worked closely with customers to meet their SharePoint data protection needs, pioneering granular item-level backup and recovery, platform-level backups and granular recovery of SharePoint farm components, providing a free SQL restore tool, and today removing the common burden of staging databases for item-level recovery to SharePoint,” said George Petrou, Senior Vice President of Product Management at AvePoint. “Combined with our fully integrated platform for complete SharePoint protection, management, and optimization, we are confident that DocAve v5.7 gives enterprises the scalability and support they need as they grow their SharePoint deployments both in scope and complexity.”

Rapid Restore of SharePoint Content with AvePoint's InstaMount™ Technology

As SharePoint 2010 is increasingly relied upon for critical business initiatives by enterprises worldwide, it is essential to restore content quickly in order to reduce Recovery Time Objectives (RTO) and meet agreed-upon Service Level Agreements. Using native SharePoint features, organizations wishing to recover individual documents had to reconstitute the entire SharePoint environment to a staging database before restoring the corrupted content into the production environment. DocAve v5.7 now removes this barrier to recovery by supporting database virtualization upon restore with its unique **InstaMount™ technology**, enabling the rapid recovery of individual items to production environments from a full database backup without having to first stage the databases. Check AvePoint's community portal, DocAve.com, for an upcoming blog series from SharePoint MVP Randy Williams, AvePoint Enterprise Trainer and Evangelist, further explaining the benefits of **InstaMount™**.

Enhanced Support for Custom SharePoint Applications

SharePoint 2010 offers organizations the ability to customize their environments to meet their specific business needs. Oftentimes, protection and management of these customizations, utilizing solutions from additional members of the SharePoint ecosystem, can become a challenge. DocAve v5.7 now provides support for Platform Backup & Recovery of:

- Nintex Workflow 2010
- KnowledgeLake Imaging for SharePoint 2010
- NewsGator Social Sites for SharePoint 2010

Additionally, DocAve v5.7 can back up any custom Application Database as part of a Platform Backup plan with [DocAve Backup and Restore](#), enabling organizations to craft a comprehensive protection and full-fidelity restore plan including custom applications as well as the rest of their SharePoint environments.

Support for SharePoint 2010 SP1-specific RBS Enhancements

As a Microsoft Gold Certified Portals and Collaboration Partner and Gold Certified ISV Partner, AvePoint has worked closely with Microsoft to ensure DocAve v5.7's [Storage Optimization Suite](#) – including DocAve Archiver, Extender, and Connector – fully supports the enhancements made to RBS and other Application Program Interfaces (APIs) by extending or archiving SharePoint content out of SQL as well as connecting file share content into SharePoint as a fully functional SharePoint object.

DocAve v5.7, which contains more than 30 independently deployable modules fully integrated via a unified, browser-based interface for comprehensive protection, management, and optimization of SharePoint, supports SharePoint 2007 and SharePoint 2010 environments and only uses supported Microsoft Methodologies and APIs.

For more information on the entire set of enhancements available in DocAve v5.7, please visit www.avepoint.com/support/product-updates. To request a free, fully enabled 30-day trial of DocAve, visit www.avepoint.com/resources/free-trial-downloads.
