AvePoint Releases SP Archiver for Microsoft SharePoint Products and Technologies, Freeing SQL Server Resources Everywhere

Somerset, NJ — September 25, 2006 — AvePoint, Inc. today announced the release of SP Archiver, a unique archiving solution for Microsoft SharePoint Products and Technologies that is designed to save valuable SQL server resources. SP Archiver is a business-rule enabled item-level archiving engine that seamlessly moves content off of your production SharePoint servers while still allowing that content to be searched, viewed, and accessed from within your SharePoint environment.

“As organizations place more and more content into their SharePoint environments, they are inevitably faced with the choice of either making additional investments in expensive servers or seeing the performance of their SharePoint environment suffer. However, if an organization was to carefully study its SharePoint environment, it would likely find that a large portion of the content had not been viewed or accessed for some time,” said TJ (Tianyi) Jiang, Vice President of Operations, AvePoint, Inc. “This inactive content still resides on the SQL servers and takes up valuable real estate. If this content could be removed, it would save considerable resources. SharePoint administrators need a seamless solution that moves the content, but still allows it to be searched and accessed from within SharePoint. AvePoint’s SP Archiver does just that. It gives customers the ability to logically decide what content will occupy their most expensive real estate, without affecting the end-user.”

“Our SharePoint portal took off. Everyone was adding documents to it. Soon sites began hitting their quota limits, and everything was slowing to a crawl. We were looking at a long and costly restructuring of our entire SharePoint deployment and infrastructure. Then AvePoint introduced us to SP Archiver, and we’ve cancelled our restructuring plans indefinitely,” said Jennifer Ke, Vice President of M&D Technologies. “This product paid for itself immediately, and was very easy to use. We set up the archiving rules, enabled the tool, and immediately saw the results. Our SQL servers, which were near capacity, now have resources to spare. With SP Archiver, we can make full use of all of our existing resources.”

AvePoint specializes in award winning, enterprise-strength backup, archiving, and auditing solutions based on Microsoft Office SharePoint Products and Technologies and Windows Project Server. Today, with 900+ production customers (many of them Fortune 500 companies) throughout the world, AvePoint has become the dominant market and technology leader in SharePoint-based staging, backup, migration, archiving, and disaster recovery solutions. www.AvePoint.com

M&D Technology Development Corporation is a global high-technology company specializing in developing and deploying customized electronic and fiber optic products. M&D Technologies provides custom optical products such as lenses, boots and modules, as well as semiconductor materials, RF transmitters and receivers, security cameras, and testing and measurement equipment.
