AvePoint Release Notes

Compliance Guardian 4

Release Notes

Service Pack 2

March 2017

New Features and Improvements

New Data Sources

- Added support for SharePoint 2016 as a source.
- Added support for Schedule Scans of Exchange Online.

New Features

- Added support for creating a Machine Learning type check to scan and predict file classification based on pre-defined learning models.

- Added support for integrating with a SIEM system and for sending the Compliance Guardian scan results to that system.

- Added support for integrating the scan results with a SIEM system in the scheduled scan plans.

- Added support for SQL 2016.

- Added support for TLS 1.2.

- Added Built-in Power BI report templates for viewing the results of the File Analysis tool.

- Added Context type checks to choose whether or not to search files that have been shared to external users.

- Added support for setting the risk severity for externally shared files.

- Added support for rescanning all of the failed objects with an incremental job.

- Added Context type checks that search the objects of a user, who has specific permissions.

- Added support for creating a Context type check in Guided Mode.

- Optimize the logic of using the Regex type check to exclude false positive results.

- Added support for three ways to define keywords when creating a Dictionary Type check: define the keywords on GUI, define the keywords by uploading a file, and define the keywords from a database.

- Improve the design of Dashboard in Incident Management Center by adding more clickable links and sections.

- Improved the Incident Manager by adding the ability to filter incidents by scan time range.

- Improved the Incident Manager by adding the ability to search by owner in Incident Management Center.

- The Incident Management Center now remembers search settings until the login session times out.

Known Issues

- In Compliance Guardian NLB environments, when the IIS Site certificate on each of the Compliance Guardian managers is different and the NLB filtering mode is **No Affinity**, there will be display issues on the Compliance Guardian Manager login page.

  Workaround: Make sure that Compliance Guardian uses the same IIS Site certificate for all of the managers or change the NLB filtering mode to **Single Affinity**.

- After updating scan plans that contain custom actions from Compliance Guardian 4 SP1 to Compliance Guardian 4 SP2, the plan does not work and the job will fail. The interface of custom action has been changed, which causes the previous version's dll file to not operate correctly.

  Workaround: Review any previous patches that include custom actions prior to upgrading to make sure those patches are included are included.

- When the Exchange Online license expires in Office 365, Compliance Guardian can still scan its mailboxes for 30 days. Compliance Guardian will remove Exchange Online from the scan scope 30 days after the expiration.

- Compliance Guardian cannot scan Reference attachments in Exchange Online.

  Root Cause: It is an API limitation that the API cannot get the Reference attachment.
