

Quick Start Guide

Website Migrator (v2.0)

Performing a Simple Website Migration Using the New AvePoint® Website Migrator

This document is intended for anyone wishing to familiarize themselves with the user interface and basic functionality of the AvePoint *Website Migrator* tool.

Before You Begin

Basic Overview

The *Website Migrator* Tool is used to migrate web-based collaboration spaces or an organization's previous portal to a SharePoint site. Options which can be migrated include the basic look and feel of the page, its content, and page structure. *Website Migrator* can also be used to convert embedded tables to SharePoint lists.

Requirements

The requirements and supported platforms for *Website Migrator*.

Supported Platforms

The **AvePoint *Website Migrator*** supports the following platform:

- Microsoft Office SharePoint Server (MOSS) 2007 – Service Pack 1
- Windows SharePoint Services (WSS) v3 – Service Pack 1(Publishing page is not supported)
- Microsoft Office SharePoint Server 2010
- Windows Server 2003, 2008 or XP
- SQL Server 2005 or 2008 (SQL Express is not supported)
- .NET Framework v2 or higher

***Note:** Please ensure that you have local administrator rights on the machine you are trying to install this software on. In addition, you should have site collection administrator rights to the destination SharePoint environment.

System Requirements

The minimum requirements for this tool are:

- **Computer / Processor** – A PC with Intel Pentium III-compatible 1000MHz processor (minimum), with a Pentium IV-compatible processor recommended
- **Memory** – 256MB of RAM (minimum), with 512MB of RAM recommended.
- **Hard Disk** – with 15MB recommended.

***Note:** Please make sure you have access to public networks from the machine you are connecting to.

Quick Installation

The Installation Wizard will guide you through this installation process. By following the steps below, you should have the *Website Migrator* up-and-running on your environment very quickly.

Installation Steps

From the system you intend to install this software:

1. **Download** the AvePoint Website Migrator ZIP file, either by requesting a demo version from: <http://www.avepoint.com/download/>, or by contacting an AvePoint representative for links to this package.
2. **Unzip** this package on the computer you want to install this tool.
3. **Run** the “Setup.exe” file found in the unzipped directory.
4. **Follow** the simple steps on screen for configuring this tool. You will be asked for a location as well as a language to install this software. You can also apply the license while installing the tool or apply it later directly from the tool’s interface.
5. After this, a screen will indicate that all services have been installed.

Congratulations! AvePoint Website Migrator is now installed on your SharePoint environment.

***Note: For the SharePoint 2010 environment, this tool must be installed on one of the web front-end (WFE) server of this environment.**

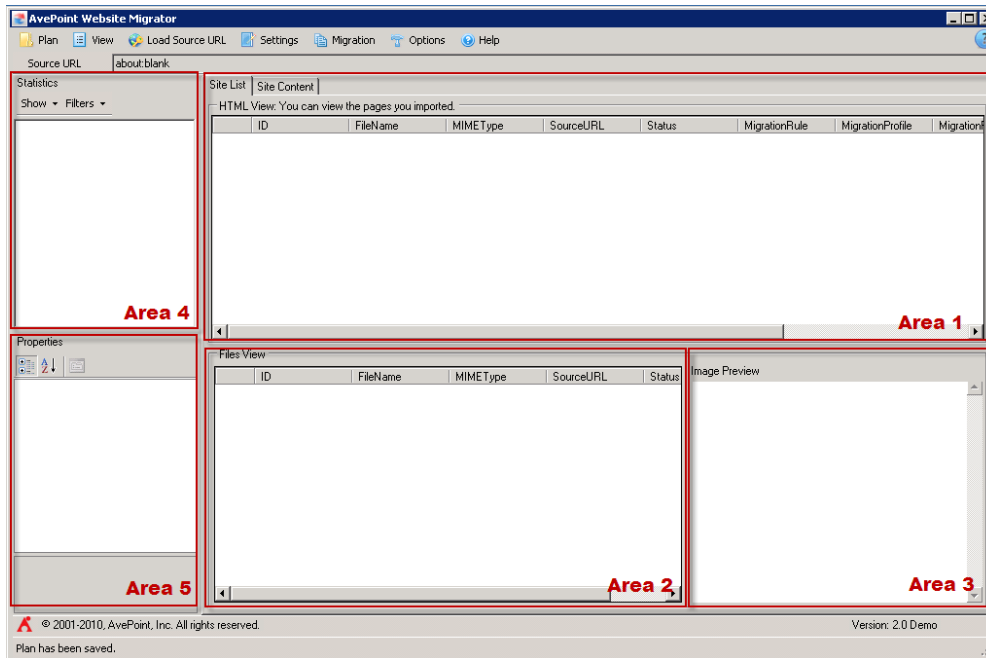

Interface Overview

This section will familiarize you with the basic user interface of this tool, and the different ways you can view your website content.

Site list view

- In the site list view, you will see a table populated with all of the contents of your website. Please refer to the figure below to see where the different areas of the screen are. **Area 1:** Shows the web pages downloaded from your website which you can customize and migrate.
- **Area 2:** Lists the files associated with the downloaded web pages. These files will be migrated along with the web pages. To locate the internal content of a page, you can select a standard page and then select its content.
- **Area 3:** Displays the images and the details of the file in this area.

- **Area 4:** Displays the statistic of the webpage's properties which you have selected from the *Show* drop-down. You can also select to view the selected pages, unselected page(s), or both in the *Filters* drop-down.
- **Area 5:** You can view the properties or the basic information of the selected webpage or files.

Site content view

This view will allow you to see a sample of the website's full content and structure.

- **Area 6:** Displays the page as it appears in a standard web browser.
- **Area 7:** Displays an HTML tree. Highlighting and selecting parts of the structure will allow you to display that part of the webpage.

Importing the content (Crawling the URLs)

Website Migrator will keep the same hierarchy of the migrated pages and will also migrate the images and documents related to the pages. For the images and documents in the websites, you can choose whether to download them or not during the initial crawl (If you do not download them, they will be downloaded it while running the migration.) In order to reduce the time it takes to perform the migration, it is recommended that you do not download the images and documents during the crawl to save the migration time.

Creating a migration plan

Before you crawl the URL, you must either create a plan for the migration job or select to use a previously created plan from the *Plan* menu. *Website Migrator* will then ask you where to save the new plan which stores all of the settings you configure for this migration plan for later use.

Importing the content

Before running a migration job, you will need to configure the following information to import the content of your website in to *Website Migrator*:

Crawling Options

In order to import the content of the website you wish to migrate, you will need to specify the corresponding URL.

1. Select the menu option *Load Source URL -> Crawl and Download URLs*. A configuration window will pop-up.
2. Enter the website URL you want to migrate into the Source URL textbox; *Website Migrator* will load the content in this website.
***Note:** Please ensure that you have sufficient access permission to view all of the information for this specific website.
3. Select a number from the Crawling Depth drop-down box to specify the depth level needed to crawl. If you select 0 in the drop-down list, *Website Migrator* will only crawl the source URL specified. If you select 2, *Website Migrator* will crawl the source URL specified, the linked pages on the source URL page, and the linked pages from the pages one level beyond that. If you want to migrate an entire website, you can select “unlimited” from the drop-down box. (Please note: you may wish to select *Stay in Domain* for this option).
4. Use the checkboxes to configure your crawling options. Descriptions of these are listed below in Additional Options..
5. If content already exists in the plan directory for this plan, you can select to overwrite it by selecting the *Overwrite* option.

Additional options

Websites can be downloaded locally and tested in offline environments before migrating to the production SharePoint server. A simple change to the web-service configuration will connect the production SharePoint environment for the final migration. There are several other crawler options for downloading the page content which can be selected:

- *Stay in Domain:* Filters the crawling results by only downloading the websites within the main URL’s domain. You should use this option if your website frequently references external links.
- *Time Out:* Specifies the maximum time(in seconds) to wait for a response from a site before skipping it during a crawl.
- *Auto Save every:* Saves the plan you are currently working on according to the interval you specify.
- *Custom Character Encoding:* If you have coded your site by using the custom encoding, you should specify the encoding into the text box to ensure the site can be crawled successfully.
- *Include Images:* Downloads the images included in the specified website during the crawl.
- *Include Scripts/CSS:* Downloads the Scripts/CSS included in the specified website during the crawl.
- *Include Docs:* Downloads any documents attached to the specified website during the crawl.
- *Overwrite:* Overwrites any content found by this plan which already exists in the plan directory.
- *Saving Path:* Displays the path where the migration plan settings will be saved. This is the path specified when the new plan was created.

***Note:** To save time during the actual migration, it is recommended that you download the corresponding images during the crawl to ensure the migration job finishes quickly.

Specifying a user

If you want to migrate a website which requires authentication to access, *Website Migrator* may need you to specify the authentication information. You can use *User Settings* to change from the default user account installed with the Website Migrator to one which has the access permission to crawl the website.

By default, the user for the website is the current user logged into the system running *Website Migrator*; you can specify another user for crawling this individual website by.

1. Navigate to the *Load Source URL -> Crawl and Download URLs*.
2. Click the **User Setting** button, a setting window will appear.
3. Check the “Specify User” check-box, and then input the Domain, Username, and Password to set up access to the website you want to migrate. Click **Okay** when done.

Starting the Crawl

After setting up the settings, you should click the **Start** button to crawl the website. In the Crawling URL Process window, you can click the **Skip** button to skip some big files, the **Pause/ Continue** button to pause/resume the crawl, and the **Cancel** button to cancel the crawl job.

Performing a Migration

This section will teach you a few simple steps to quickly setup a basic migration plan and perform a website migration to your SharePoint environment using the *Website Migrator*.

Choosing the Content

With AvePoint *Website Migrator*, you can select the content to migrate to your SharePoint environment. To load this content, follow the steps below.

1. Within **HTML View** field under the **Site List**, click the file you want to migrate to highlight this row. This will load the page and the webpage structure tree under the **Site Content** area.
2. Go to the **Site Content** tab, you can preview the webpage you selected with all related documents and images in the left-hand area.
3. If there is any error for the page structure, you can click the **Correct Page Structure** button to reload the webpage. You can also select the webpages you want to update the page structure within **HTML view** area and update the page structure by using the **Update Html Source Code** option under the “**Options**” menu.

Configuring a Top Link Bar/Quick Launch Bar

By using AvePoint *Website Migrator*, you can migrate the navigation bar as a top link bar or quick launch bar in SharePoint. To configure the top link bar, follow the steps below.

1. Within the “**Site Content**” tab, select the navigation bar field by checking the corresponding check-box in the Structure View area.

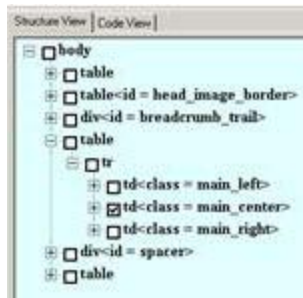

2. Right click the navigation bar node, and then select the **Save as Top Link Bar** option to make the field you select as a top link bar in SharePoint, or the **Save as Quick Launch Bar** option to make the field you select as a quick launch bar.

Customizing the Migration Rule

Customized mapping rules between sites and SharePoint can be reused on most sites, which can save time when migrating similar pages within your organization. If you want to use migration rule to migrate a webpage to your SharePoint environment, you must set up the migration rule for the webpage by following steps below.

1. Navigate to *Setting -> Migration Rule -> Set Migration Rule*; it will display the “Site Content” area.
2. Select the area you want to migration by checking the corresponding check-box on the structure tree. It will highlight the selected structure in the **Preview** area on the left.
3. Click the **Save as a rule** button, a setting pop-up will appear.
4. Select a method for the rule by checking the corresponding box.
 - *Save Structure As Rule*: Migrates the area you have selected depending on the structure of the webpage.
 - *Save Attribute As Rule*: Migrates the area you have selected depending on the attribute of the webpage.

For example, select the node as the following screenshot; if you set **Save Structure as Rule** as the migration rule, the content will be migrated with the structure as `body(1)/table(3)/tr(1)/td(2)`; if you set **Save Attribute as Rule**, the content named “td” and with the “class = main_center” attribute will be migrated.

5. Click the **Save** button to save the rule you set up. You can also click the **Save and Assign** button to save the rule and apply the rule to this selected webpage.
6. Once the rule has been created, you can apply this rule to other similar web pages.
7. Select a row which has been assigned a rule in Site List, and then click Site Content tab, the preview result of applying the rule can be seen under highlighted area.

Adding the Migration Rule for a webpage

To specify a migration rule for the webpage, you can select **Assign Migration Rule** under the **Setting** menu, and select the rule you want to apply from the corresponding drop-down list in the pop-up window. You can apply the rule to the similar webpages until all of the desired pages have the rules.

Deleting a Migration Rule for a webpage

If you want to delete a rule for the webpage, you can select the **Unassign Migration Rule**. This will remove the migration rule for the specific webpage.

Defining a Custom Column

Website Migrator can save the metadata in the parent node of the webpage as a column in the **HTML View** area under the Site List tab. If you want to migrate some of these attributes of the web pages, you must configure the settings below first:

1. Navigate to *Setting -> Custom Column -> Define Custom Column*; it will turn to the **Site Content** area.
2. Right click the node you want to set up on the structure tree, select the **Save Content as a Column**. A pop-up will appear.
3. Enter the new column name, or add it to an existing column.
4. Click **OK**, there will be a new column in the **HTML View** area under the Site List tab.

Applying the Custom Column for a webpage

To apply a custom column for the webpage, select **Assign Custom Column** under the **Setting** menu for the specific webpage. Next, select the column you want to apply from the corresponding drop-down list in the pop-up window. This will display the content of the metadata into the corresponding column. If you want to display some specific content, you can select the Custom option and enter the content you want to display into the provided field.

Deleting a Custom Column for a webpage

If you want to delete a custom column for the webpage, select the **Unassign Custom Column**, and the custom column for the specific webpage will be removed.

Customizing the Destination File Name Rule

To change the destination file name of a webpage or its content during the migration process, you must apply the destination file name rule.

1. Select a webpage you want to migrate and go to the "Site Content" tab.
2. Right click the area you want to use as a destination name, and then select the **Set as Destination File Name Rule** option, a setting pop-up will appear.

3. Select a method for the rule by checking the corresponding box.
 - *Save Structure As Rule*: Changes the destination folder name depending on the structure of the webpage you selected.
 - *Save Attribute As Rule*: Changes the destination folder name depending on the attribute of the webpage you selected.
4. Click the **Save** button to save the rule you setup.

Adding the Name Rule for a webpage

To specify a name rule for the webpage, you can select **Assign a Rule to Get Destination File Name** under the Setting menu, and select the rule you want to apply from the corresponding drop-down list in the pop-up window. Apply the rule to the selected webpages.

Setting up the Migration Profile

To migrate a website to your SharePoint environment, you must setup a migration profile. This will define where to migrate the pages and the options of the migration such as the layout, image, css, etc. To set up a migration profile, please follow the steps below:

1. Navigate to *Setting -> Migration Profile -> Set Migration Profile*.
2. Click **Load** to load the SharePoint site, and then select a site as destination in the “SharePoint Site List” area by clicking the corresponding URL. If you want to migrate the website to a remote SharePoint site, you need setup a connection using the **Add Site** option. For more information about adding a remote site, please refer to “[Add a Remote Site](#)” section.

***Note:** if you select a remote site, you will cannot migrate the navigation bar as a top link bar or quick launch bar in SharePoint site.
3. Select the location you want to save the content of the website, there are three kinds you can select.
 - *Pages*: This option will be listed in the Folder field if you choose a publishing site. You can select the Pages directly or click the plus icon to expand the tree to select a folder under the pages, and the content of the website will be saved in this folder. You can also configure a custom column mapping for the metadata of the webpage. For more information about it, please refer to “[Setting up a Custom Column Mapping](#)” section.
 - *Root Folder*: If you select this option, it will save the content of the website to the root folder, but you can only view the content using the SharePoint Designer.
 - *Wiki Page*: It will save the content to the wiki page.
4. If you select *Pages* in the folder field, you must select a page layout from the drop-down box.
5. Enter a profile name for the migration profile.

6. There are several options for the migration. You can select migrate with documents, images, CSS, or Script by checking the corresponding check-boxes.
 - *Migrate with Document:* Migrates the document. The document will be saved in the location where you specified in the provided field. The default location is a document library named **Documents**. If the specific list/library does not exist, it will create a document library with the corresponding name for the migrated documents.
 - *Migrate with Images:* Migrates the image. The image will be saved in the location where you specified in the provided field. The default location is a picture library named **Images**. If the specific list/library does not exist, it will create a picture list with the corresponding name for the migrated images.
 - *Migrate with CSS:* Loads the CSS file to the code to keep the structure as the same as the webpage in the SharePoint Site.
 - *Migrate with Script:* Migrates the site with its script. This option is only used for the Root Folder.
 - *Migrate with Top Link Bar/Quick Launch Bar:* If you want to migrate the navigation bar as a top link bar/quick launch bar in SharePoint, you should select the profile from the drop-down box. For more information to setup a profile, please refer to the section [“Configuring a Top Link Bar/Quick Launch Bar”](#).
***Note:** You cannot migrate a navigation bar of a shared parent site as a top link bar or quick launch bar to the SharePoint site.
 - *Migrate subfolder as subsite:* (This option can be used if you select the Root Folder). Saves the subfolder as a subsite in the Root Folder. For example, the original website URL is http://a/b/c.html, the destination URL will be “http://a(site name)/b(it is a subsite)/c.aspx” if you select this option, otherwise, the destination URL will be “http://a(site name)/b(it is a folder)/c.aspx”.

***Notes:** if you already perform a migration job to the root folder, you cannot run a job to this root folder by another method. For example, you already performed a migration job to the root folder without the *Migrate subfolder as subsite* option, if you perform a migration job selected the *Migrate subfolder as subsite* option to this root folder again, the second migration job will failed.
 - *Maximum upload size:* If you have selected to Migrate **with documents** or **images**, you can limit the maximum upload size by using this option.
7. Click the **Save** button to save the configuration, or click the **Save and Assign** button to save the configuration and apply the profile for the specified webpage.
8. This will apply the migration profiles to the pages. You will perform the migration later.

Adding a Remote Site

The AvePoint *Website Migrator* allows you migrate the website to a remote SharePoint site using web service from your local XP machine. To setup a connection with the remote site, please follow the steps below.

1. Navigate to *Settings* -> *Add Site*, the setting window will appear.

2. There are two kinds of authentication methods: Windows and Form.
3. Input the SharePoint site URL where you want to migrate website in the provided field, and the corresponding Domain, Username, and Password to set up access to the remote SharePoint site.
4. Click the **Add** button, the remote SharePoint site will be listed in the “Migration Profile” setting window.

Setting up a Custom Column Mapping

If you want to migrate the custom column to the SharePoint site, you need to configure the custom column mapping. Once the mapping is configured, the corresponding metadata will be saved as an item attribute in the destination.

***Note:** The destination site must be a publishing site.

1. Go to **Migration Profile** under **Settings** menu, select **Define Migration Profile**, and then Migration Profile window will popup. After loading a publishing site, click **Custom Column Mapping** and the configuration window will appear.
2. Select the column you set up in the Custom Columns area, and then select the destination column you want to map the custom column to in the Destination Columns area. For more information about how to define a custom column, please refer to “[Defining a Custom Column](#)” section.
3. If you want to add new column into the destination, you can click **Add Column** to add a new column. In the **Add Column** pop-up, specify the column name and its type, and then click OK. The new column will be listed in the Destination Column field, and it will be created when running the migration job.
4. To remove the column which you do not want to migrate, select the column and click **Remove**.
5. Click **Map** to save the mapping, and the mapped column will be listed underneath. You can select the mapped column and click **Unmap** to delete it.
6. You can also click **Save as Default Mapping** to save it as a default mapping.
7. Click **Close** to save the configuration and the metadata for each column will be migrated as an item attribute in the destination site.

***Note:** The title attribute cannot be mapped to a remote site as a column.

Migrating a table to a list

AvePoint *Website Migrator* can also migrate embedded tables into SharePoint lists for a seamless display for end-users and improved SharePoint based management. To migrate tables, please follow the steps below.

1. Within the **Site Content** tab, check the check box to select the node of the table in the structure tree. You can select an individual table or select the Body node to select all the tables in this specific webpage.
2. Navigate to *Migration -> Migrate Table to Lists* or click the **Migrate Table to List** button within the **Site Content** tab, a pop-up window will appear.

3. Select a site as destination in the **SharePoint Site List** area by clicking the corresponding URL. It will create a list under the specified site to migrate the table(s).
4. Enter a list name for the new list into the **List Name** text box under the **Migrate Console** area. You can also click the **Save** button to save the configuration, and load it in the next time by clicking the **Load** button under the **Save** button.
5. Click the **Migrate** button to start the migration job. If you do not configure the Advanced Setting, it will migrate the table directly; if you make some changes on the table(s), the table(s) will migrate according to the configuration set up for the SharePoint list. The status of the job will be listed in the **Status** field.

Advanced Settings

You can make some changes for the selected tables in the advanced settings, please follow the step below.

1. Click the **Advanced** button to open the advanced settings pop-up.
2. Click the **Skip** button to skip the table you do not want to migrate. The table structure tree is listed on the right.
3. Enter the new column name in the corresponding text box, and click **Add** button to add it; it will be listed on the left. You can also double-click the column name on the structure tree to rename the column.
4. Click the **OK** button next to the **Skip** button to go to the next table. You can click **Reset** button to cancel the changes you made.
5. After configuring, click the **Save** button to save the modification.
6. Click the **Close** button to close the pop-up.

***Note:** The amount of the columns to be migrated is fixed. If the node of the html is "th"/"thead", it will migrate this row as a head, and migrate other rows whose column number is the same as the "th" row. If there is no the "th" row, it will migrate the rows according to the number of the columns. For example, there are three rows, one row has four columns, and the others have three columns, it will migrate the rows with three columns.

Migrating a Website to SharePoint

After applying the appropriate **migration rule** and **migration profile** to the webpage, you can now run a migration job. You can also save the configuration, and run this plan at a later time.

1. Navigate to *Migration -> Migrate to SharePoint*, a pop-up window will appear.
2. Click the **Start** button in the pop-up window to start migrate the webpage.
3. If you select the **Overwrite** option before you start the migration job, *Website Migrator* will overwrite the content of whatever exists in the specified migration destination.
4. You can click the **Stop** button to stop the job, or the **Pause / Continue** to pause or continue the migration job.

5. After migrating the webpage(s), the source URL, target URL and the status of the migration job will be displayed. You can select the **View Error Log** option and click the **Close** button to view the log.
6. After migration, all the link pages link to the original webpage, not the page migrated to the SharePoint site; you must select the **Update Migrated URLs** under the **Options** menu to update them to the URLs for the SharePoint Sites.

***Note:** If you want to update the migrated URLs for the destination which is a remote site and whose list type is wiki page, the value of the **date and time** will be lost after the update.
7. Web pages will still keep the bookmark linking feature after migrating, however for MailTo hyperlinks, you must change the mail domain by using the **Change Mail Domain** option under the **Options** menu.

Batch Mode for Website Migration

You can run multiple plans simultaneously by using batch mode. If you have a large number of plans, we recommend running them by batch mode, since this is the fastest way to run the migration jobs.

1. Navigate to Plan -> Open Multiple Plans, a pop-up window will appear.
2. Click **Add** to add the plans you want to run. All the plans will be listed in the pop-up.
3. Click **Run** to run the migration plans by one time. After the migration plans completed, it will listed the migration report in a pop-up.
4. For the plans you do not want to run, you can click **Remove** to delete the plan from the list.

Batch Mode CLI

AvePoint Website Migrator supports the administrator to run the batch mode by using CLI (Command Line Interface).

1. Go to Start -> Run, and then enter the cmd in the provided field to run the cmd program.
2. Enter the command "AvePoint Website Migrator.exe" -c -overwrite ".../Plan1" ".../Plan2"... or "Website Migrator.exe" -c ".../Plan1" ".../Plan2"... to run the overwrite or not overwrite migration jobs.

Supported and Unsupported list of CSS and JavaScript for Root Folder, Wiki Pages and Pages

Tag	Apply Method	Root Folder	Wiki Pages	Pages	Comment	Common Comment
CSS	Inline style applied in <i>body</i> tab of HTML	Supported	Supported	Supported	Please refer to All Attributes worksheet to view the details.	If there are pictures, web pages, audio files, and video files in CSS and JavaScript, these files cannot be migrated to destination.
	Internal style sheet which locates in <i>head</i> tab	Unsupported	Unsupported	Unsupported	All styles in <i>head</i> tab are saved in relevant CDATA for the convenience of modifying it manually.	

	External style sheet used by <i>Link</i>	Supported	Supported	Supported	If the migrated CSS applied on SharePoint webpage, it may affect SharePoint's experience. Meanwhile, the destination experience may be different from the source one, since SharePoint's built-in CSS may also affect or overwrite the migrated CSS.	You can upload these files to destination manually and modify relevant CSS and JavaScript.
JavaScript	Inline JavaScript applied in <i>body</i> tab of HTML	Unsupported	Unsupported	Unsupported	All JavaScript in <i>body</i> tab are saved in relevant CDATA for the convenience of modifying it manually.	
	Internal style sheet which locates in <i>head</i> tab	Unsupported	Unsupported	Unsupported	For Root Folder, JavaScript will be saved in CDATA for the convenience of modifying it manually. For Publishing Page and Wiki Page, it will lose the JavaScript because of the limitation of SharePoint itself.	
	External JavaScript used by <i>Link</i>	Supported	Unsupported	Unsupported	The referenced JavaScript file will be migrated to destination, while the link sentence in Publishing Page and Wiki Page will be lost.	

AvePoint Website Migrator FAQ

- Q: A JavaScript Error or Debug warning popped up while previewing the website in the Site Content tab.

A: This problem is typically caused by a source code error on the original website, but there is no influences in the migration result. If your browser does not have the “disable script debugging” option selected, this prompt will also pop-up in IE. You can configure this setting in the “Internet Options”.

- Q: Nothing displays in the Site Content interface after crawling the URL. This issue still exists after correcting the page structure.
A: For some webpages written with non-standard HTML code (nodes / attributes without quotation marks, nodes that have no corresponding ending node, etc), there may be some errors while converting the source code from HTML to XML. We recommend ensuring that your pages follow best practices of HTML programming prior to migrating to SharePoint.
- Q: Some of the content is missing after performing the migration.
A: In general, there are three key reasons for missing content:
 - a) For some non-standard webpages, there may be some errors while converting the source code from HTML to XML class library; so content may be lost during the conversion. For this reason, it is recommended you to correct the page structure before migrating using the screen.
 - b) Some of the contents may not be supported by this product. Please check the supported and unsupported lists in the user guide. For example, this tool cannot support migrating some JavaScript code.
 - c) SharePoint may not support the contents you are attempting to migrate. Please check the SharePoint file filter lists.
- Q: The folder for a plan will be generated after opening the program, even if you have deleted this plan and the corresponding folder in the installation directory.
A: If the program cannot load the plan while opening, it will create the folder and add the error log into it. It is recommended that you use the “Delete Current Plan” option to avoid this issue.
- Q: Can the plans created on this installation be used on another computer to perform a migration?
A: Yes, you can. You need to copy the plan files and the corresponding folders under the installation directory to the destination server. Please make sure you maintain the relative path when performing this move.
- Q: Where can detailed logs of the migration be downloaded or viewed?
A: You can find the logs in the “Logs” folder within plan folder of the installation directory.
- Q: There are some spaces in the links URL of the source page, but these were removed after the migration.
A: Website Migrator automatically ignores some spaces between the nodes while converting the webpages from HTML to XML in order to ensure compatibility during migration.
- Q: During the migration, the SQLSERVER process memory usage on the SharePoint server increases dramatically, sometimes even higher than 1.5 GB of RAM.
A: This typically happens when a large number of pages are included in a single plan. The increased memory usage is caused by SharePoint, there is no good solution for it.
- Q: I selected to download the images on a webpage while crawling, but some pictures cannot be found when opening it.
A: Sometimes, a URL for a file or folder does not contain an extension; it is just a directory, not a file, so you cannot find the file.
- Q: I set the migration depth greater than 0, but very little content is migrated, and it only downloads the webpage without any link pages.
A: Please make sure that the URL you are using is the actual URL of the page. If the URL provided only redirects you to a different page, the skipped page may be counted in the “depth” that has been migrated.

- Q: I've included the "Migrate with CSS" option, but the destination layout is different from the source layout, and it doesn't appear that SharePoint applied the CSS.
A: The default CSS layout definition is used for the entire page width, but the default SharePoint page layout includes the quick launch bar. If you want to migrate the page to be the same as the original, it is recommended that you use a page whose layout does not leverage the quick launch bar.

- Q: While using the option to migrate a site to a Root Folder (rather than as subsites), there are many JavaScript errors.
A: Some JavaScript does not migrate to SharePoint as expected. Reasons could be:
 - a) The JavaScript code contains errors, and cannot be used
 - b) Some of the relative paths were not analyzed / migrated properly
 - c) SharePoint may have encountered security issues with the JavaScript code.

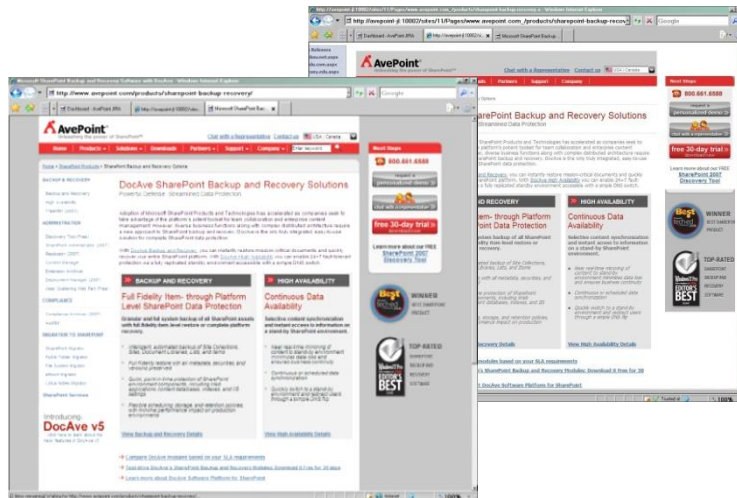

- Q: Some pictures were not migrated after the migration job completes.
A: Only the pictures in Img and Input nodes can be migrated now, you need to check the node where these pictures write to. If the pictures are not in the Img or Input nodes, it cannot be migrated to the destination.

- Q: I've included the "Migrate with top link/quick launch" option, but there are some sites without the top link/quick launch after the migration job completes.
A: Please make sure the links you want to migrate belong to the same site or subsite in SharePoint. If they belong to different sites, they cannot be migrated.

- Q: Some custom columns cannot be mapped to the destination site.
A: The custom columns will be migrated according to its attribute type, please setup the mapping according to the attribute type of PageItem.

Congratulations!

Now that you have migrated your website contents to SharePoint, you will experience an increase in user collaboration for the contents of this site. For more detailed guidance regarding the AvePoint Migrator, please reference the videos at ... \AvePoint\AvePoint Website Migrator\New Feature Guide.
