DocAve Backup and Restore addresses the need for a fast, flexible, and intelligent backup solution for Microsoft SharePoint. Full fidelity, item-through-platform level capabilities protects your entire farm, and allows for fast granular recovery. DocAve's exclusive Business Criticality Matrix automatically classifies SharePoint content according to business importance and usage activity. This allows you to optimize storage and system resources as well as execute rule-based backups based on real-time, item-level data analysis.

DocAve delivers full-fidelity backup and recovery functionality for individual content items, an entire SharePoint environments, its farm-level components and content externalized with the DocAve Storage Optimization Suite. Granular restores can be conducted from DocAve, SQL native backups created by T-SQL script or a maintenance plan, DPM, IBM-TSM, HP Data Protector, as well as third-party embedded SQL backup engines, including HyperBac and LiteSpeed Engine.

Business Advantages

- Automatic classification of content according to business criticality and usage activity, enabling the creation of highly targeted backup schedules for optimal coverage

- Fast backup and recovery of business-critical documents in a live environment with minimum impact

- Quickly and efficiently recover all SharePoint servers, databases, indexes, and settings, dramatically reducing the effort needed to restore SharePoint components or farms

- Limit service interruptions and data loss to satisfy the most aggressive SLA's while ensuring business continuity

- Safeguard multiple distributed SharePoint farms from a single interface

- Criticality Matrix allows automated backup of content, dramatically improving backup operations and storage efficiency

*As with all AvePoint software, the DocAve Software Platform leverages only fully supported Microsoft methodologies and API's.

DocAve Backup and Restore Technical Advantages

- Automatic classification of SharePoint content according to business importance and usage activity via the Business Criticality Matrix.

- Full, incremental, and differential backup capabilities for selective farm components enable customers to build backup plans and schedules that focus on frequent backup of high priority data, improving backup operations and storage efficiency.

- Backup and recover entire SharePoint farms or selective components, including all servers, back-end SQL databases with all configurations, Index/Job servers, front-end IIS settings, file system resources, and externalized data.

- Full-fidelity backup/restore from DocAve, SQL Server, DPM, IBM-TSM, HP Data Protector, and third-party embedded SQL backup engines, including HyperBac and LiteSpeed Engine, of all lists, libraries and items, with their requisite access permissions, metadata, and version histories.

- Granular, item-level restore via sliding timeline view, full text keyword search and identification criteria mask search.

- Fast, consistent point-in-time snapshots leveraging Microsoft's Volume Shadow Copy Service (VSS), approaching speeds of up to 170GB/hour.

- Backup to centrally managed tiered network or cloud storage location with built-in encryption, compression, and retention policies. Full integration with EMC Centera technology enables data de-duplication to further optimize storage resources.

- Load balancing across all front-end web servers for efficient resource utilization.

- Restore content from either DocAve, SQL Server, or DPM backups to separate locations or SharePoint instances, file systems or networked file-shares with out-of-place restore.

Supported Environments

Microsoft SharePoint Server 2010
Microsoft Office SharePoint Server 2007

Microsoft SharePoint Foundation
Windows SharePoint Services v3
