AvePoint DocAve

Microsoft® SharePoint® and Office 365 Migration
with DocAve EMC Documentum Migrator

Quickly consolidate enterprise content from EMC® Documentum into Microsoft SharePoint Server and SharePoint Online.

Key Benefits

Pre-Migration Discovery

Inventory source environments with detailed discovery and pre-scan, to inform your migration project planning – including required mappings, prioritization, and content or customizations requiring re-work.

Seamless Migration

DocAve EMC Documentum Migrator for SharePoint reduces content sprawl, centralizing all legacy collaborative assets onto a single SharePoint repository with full fidelity.

Legacy Asset Protection

Minimize business user interruption by ensuring critical information residing in legacy content sources – including all associated metadata – is preserved and available in SharePoint or Office 365.

Flexible Migration And Scheduling

Migrate an entire workspace, a document library, or just a single list item. Customizable mapping provides total control over the architecture of migrated material. Granular content migration and flexible job scheduling allows administrators to plan migration jobs according to specific business needs.

Migration to SharePoint Made Easy

DocAve EMC Documentum Migrator is the industry's most efficient and cost-effective solution for the transfer of collaborative repositories, cabinets, and folders from EMC Documentum to SharePoint Servers, SharePoint Online and OneDrive for Business. DocAve automates the process of consolidating multiple EMC Documentum content sources onto SharePoint for optimized collaboration and document management, thereby maximizing return on investment for legacy content.
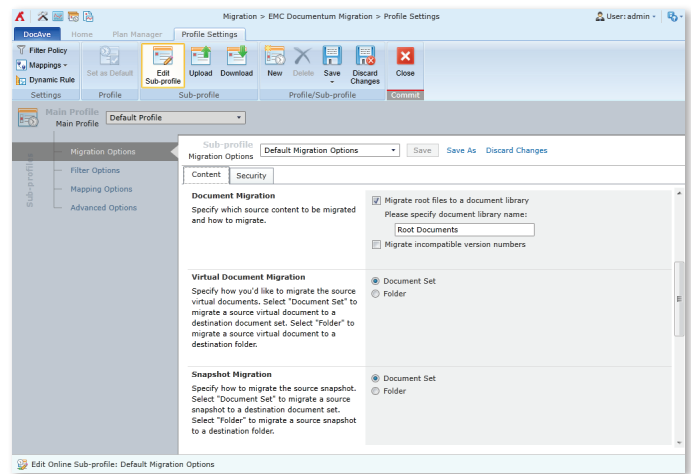

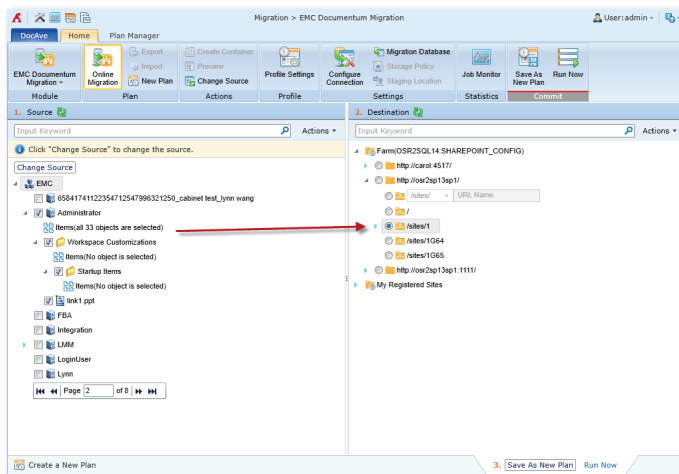

Pre-Migration

- Scan source content prior to migration to identify the scope of migration, and detect any illegal characters, user permissions, user names, user domains, and other EMC Documentum elements that must be mapped in order to successfully migrate to SharePoint Server or Office 365
- Create dynamic rules based on out-of-the-box interfaces to customize mappings and filter policies in order to meet specific business needs, including the ability to create new managed metadata in the destination

Migration with Full Fidelity

- Selectively migrate content – including cabinets, folders, documents, virtual documents, renditions, snapshots as well as linked folders/documents – according to business needs with granular content selection as well as customizable filtering options based on content properties, and perform test runs to validate migration plan configurations
- Preserve all metadata – including security settings, attributes, and properties – with full fidelity, utilizing customizable mappings to properly represent EMC Documentum elements and quickly take advantage of SharePoint's features such as Managed Metadata
- Migrate source metadata as nested terms under the Managed Metadata Service destination based on a user-defined term set path
- Perform full and subsequent incremental migrations to keep network bandwidth resources optimized, only migrating content that has been updated since the last migration
- Migrate into pre-created sites, or create sites on the fly, and reorganize folder structures after migrating to destination libraries and record the source folder paths as column values

Optimized User Experience

- Delegate migration plan management based on administrative roles
- Keep source and destination environments in sync with customizable scheduling to minimize business disruption throughout the course of the migration project
- Prioritize existing migration plans to ensure projects are executed according to organizational timetables

Point-and-click migration simplifies the transfer of content into SharePoint.
