

AVEPOINT COMPLIANCE GUARDIAN

FOR DATA CLASSIFICATION

STANDARDIZING CLASSIFICATION WITHOUT ALL THE WORK

KEY BENEFITS

DATA TAGGING

Automated and assisted tagging builds standard information such as ownership, geography, file location, and sensitivity level into content property, while providing the flexibility to establish classification standards for your organization's specific needs. Involving data owners from the start makes it clear whom to contact for permissions and incident management.

DATA CLASSIFICATION

Once you understand the data you have, determine what relevant information to attach to existing and future files and documents. Standardizing taxonomy and enforcing classification makes it easier to manage and restructure data in the future, and provide more details in the reports you generate for your information security team.

DATA SECURITY

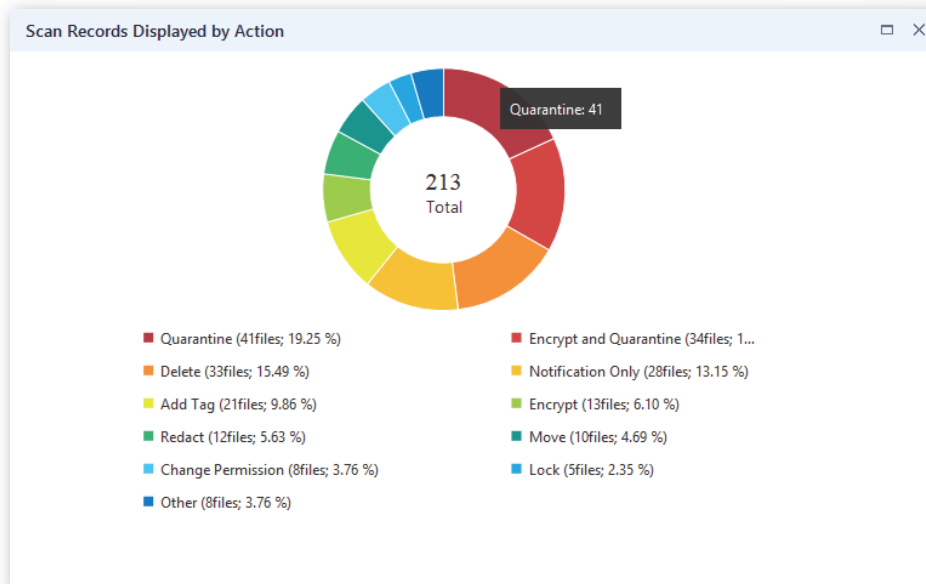

Securing your data begins with diligently tagging and classifying new data as well as keeping up with changes to existing data. Content-based tagging with ongoing monitoring immediately identifies and isolates violations in privacy and policies to protect your data from inappropriate access and sensitive content.

AUTOMATED COMPLIANCE SOLUTIONS

Securing your data starts with knowing what it is first. Standardize classification by automatically tagging new and existing files based on content, context, and ownership to not only save time and IT resources, but make it possible to automatically enforce permissions and information governance.

TECHNICAL OVERVIEW

- Scan enterprise content in real time or on a schedule against out-of-the-box or customized check files – based on regulatory and statutory compliance or your own policies – that include plain text search terms, regular expressions, and report criteria
- Classify content with user-assisted or automated tagging via a Metadata Classification Engine
- Based on content classification, assign permissions; route to the appropriate location; and block, delete, quarantine, encrypt, or redact sensitive data to comply with information governance policies

Scan Records Displayed by Action

Add a [Static](#) tag in the [File and SharePoint](#): <Enter a Tag Name> <Enter a Tag Value>

Advanced

Add Tag with alert

Start an incident in Incident Manager when action is executed, and the incident will be assigned to:

Save Cancel

Add Appropriate Tags to Enforce Classification
