

AVEPOINT COMPLIANCE GUARDIAN

FOR INCIDENT MANAGEMENT

PROTECTING YOUR CONTENT EVERY STEP OF THE WAY

KEY BENEFITS

ROLE-BASED
INCIDENT
ASSIGNMENT

INCIDENT
PRIORITIZATION

COMPREHENSIVE
REVIEW PROCESS

TRUST &
VERIFY

Map content to roles such as creators, owners, legal teams, or user groups specific to your organization so the right person can quickly assess and resolve violations.

By mapping content and having violations sent to specific roles such as content creators, owners, compliance / legal teams, or designated user groups, risk reports become actionable.

Sort ranked reports by a simple risk scoring system along with our visual heat maps to locate the highest concentration of violations by location and frequency so you can take action right away.

After all, not all risks are created equal.

Automatically block, quarantine, redact, encrypt, and delete files containing sensitive information upon upload – or during a recurring or on-demand scan – and notify the proper user or user groups to verify and confirm the appropriate action to take.

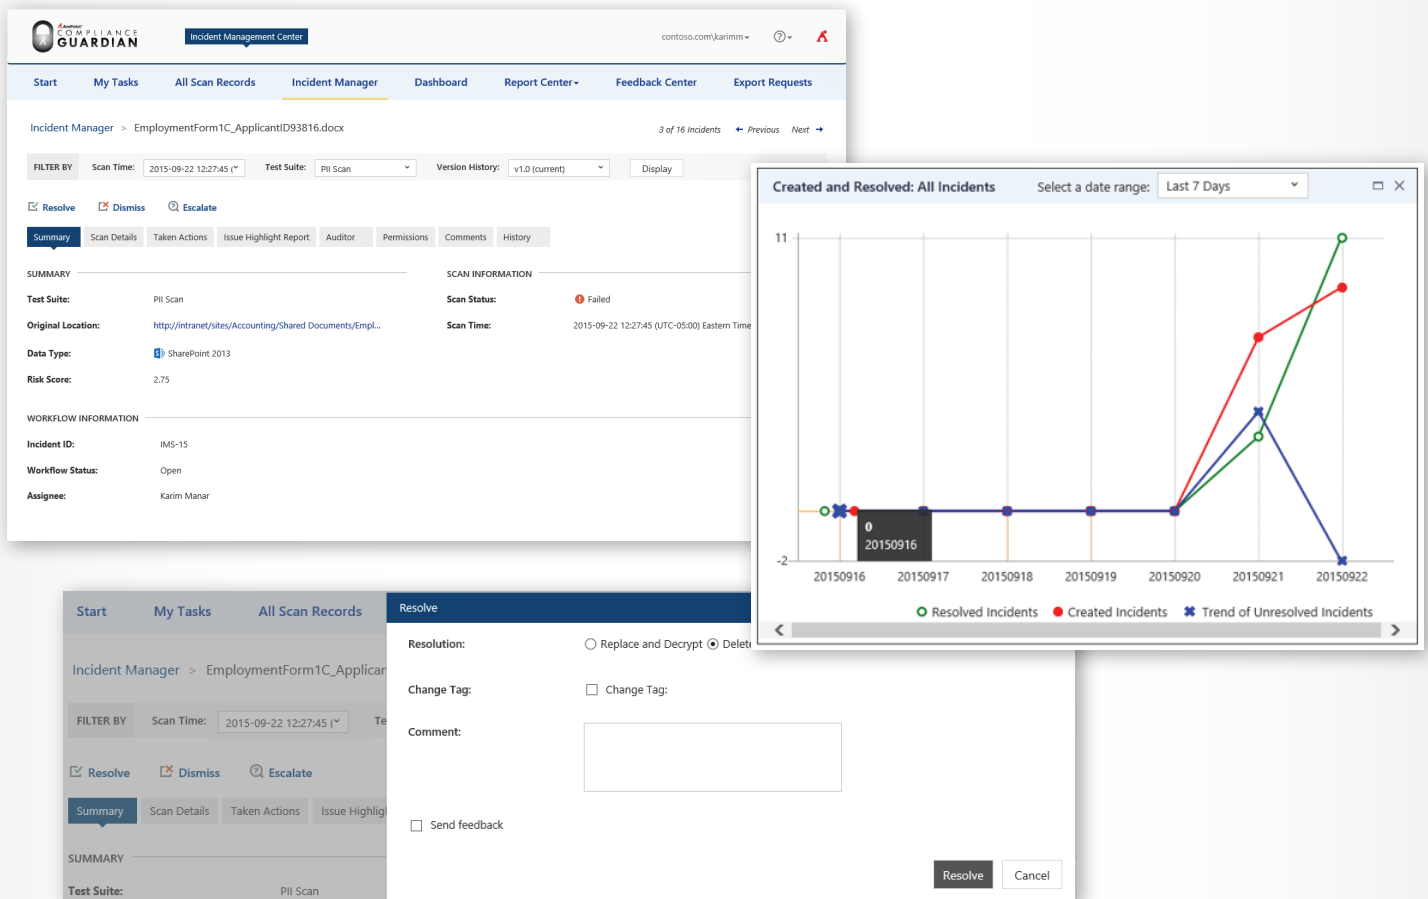

Misclassifying information can inadvertently put your data at risk. Find the right balance with human-assisted tagging verifiable by automated checks via criteria-based rules to ensure all data is correctly tagged and classified to meet the toughest of regulations.

MAKING SENSE OF YOUR RISKS SO YOU CAN TAKE ACTION

Identifying potential risks within your information is just the first step. Take action to quickly and efficiently resolve issues with security-trimmed, pre-prioritized reports that provide guidance to your content owners and compliance teams to target the most critical violations.

TECHNICAL FEATURES

- Based on content classification, delete, quarantine, encrypt, or route the content to the appropriate location to comply with information governance policies.
- Automatic redaction of sensitive or offending information exposed in content to remediate non-compliance and mitigate business disruption.
- Graphical displays of full system scans, risk assessment, classification, and action results as well as the ability to automatically input all compliance risk data and reports into HTML or Microsoft Excel files for download and reference.
- Enhanced incident tracking and management through an automated incident management system incorporates human reviews to check status, classification result, as well as document content to enable flexible remediation and reduce false positives.
