AVEPOINT COMPLIANCE GUARDIAN
FOR DATABASES

Say it. Do it. Prove it. Accelerate database compliance and safeguard your databases with a comprehensive risk management process.

KEY BENEFITS

| RISK ASSESSMENT	PRIORITIZATION	REPORTING	TRACKING
Mitigate and reduce sensitive information leak, misuse, or illegal disclosure by automatically scanning, identifying, and assessing business data. Scan structured and non-structured data across enterprise databases against privacy and information security policies.	Prioritize the severity of risk-defined content with advanced risk calculators, enabling stakeholders to implement appropriate and effective plans to resolve the most critical issues first.	Quickly address and gain comprehensive insight into risk-defined content by aggregating compliance scan results across your databases, presenting insights in executive dashboards, configurable risk analysis indicators, or error highlight reports.	Monitor data growth and track your compliance improvement with trend reports and historical analyses. Combine automation with human review to ensure accuracy, recalculating compliance reports and reducing false positives quickly and easily.

COMPREHENSIVE RISK MANAGEMENT FOR DATABASES

AvePoint Compliance Guardian for Databases helps organizations mitigate the risk of privacy and information security across their enterprise databases, including Microsoft SQL Server and Oracle Database, comprehensively evaluating the data against global or organizational compliance guidelines and policies.

TECHNICAL FEATURES

- Scan enterprise databases, including Microsoft SQL Server and Oracle Database, against proprietary out-of-the-box or customized information governance check files that include plain text search terms, regular expressions, HTML elements, XML elements, and report criteria

- Evaluate Office files, PDFs, AutoCAD files, .zip files, and hundreds of other file types as well as associated file metadata stored in your databases for privacy and information security issues

- Assess risk levels of database content with Advanced Risk Calculators which provide sophisticated logic that offers multiple perspectives on potential risk within content, using out-of-the-box and customizable algorithms to determine raw risk, stepped risk, and weighted risk across database content

- Scan multiple content sources utilizing the Compliance Guardian API to integrate enterprise-wide content compliance efforts

- Present scan and risk assessment results in graphical dashboard displays, or export all compliance risk data and reports into HTML or Microsoft Excel files for reference and distribution

- Highlight the database content that violates the specified compliance standards or guidelines to help organizations quickly address the sensitive information and relevant context

- Utilize human review to monitor and change check status in order to enable exception handling and reduce false positives

- Generate actionable email notifications upon identification of sensitive or non-compliant content for relevant stakeholders to take decisive action

- Monitor content on an ongoing basis and utilize comprehensive, detailed reporting to demonstrate compliance with ongoing risk management practices
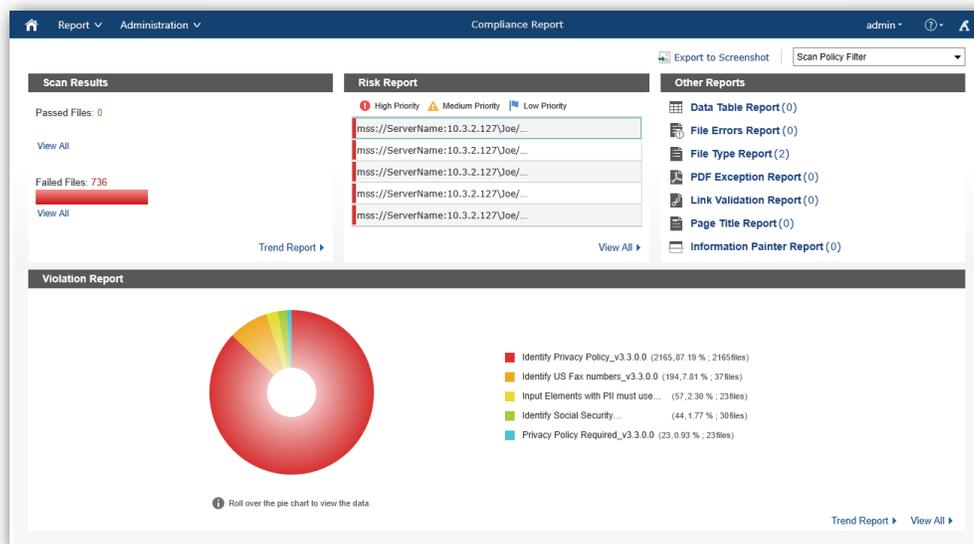

Gain a holistic view of your enterprise databases' risk levels, as well as overall compliance status, with AvePoint Compliance Guardian.
