ENSURE INFORMATION SECURITY ACROSS SHAREPOINT, FILE SHARES, DATABASES, WEBSITES, OFFICE 365, EXCHANGE ONLINE, BOX, SKYPE FOR BUSINESS, & YAMMER

With all-in-one scanning, reporting, and built-in issues resolution, AvePoint Compliance Guardian helps you mitigate risk from the moment data is created through its entire lifecycle, proactively monitoring and neutralizing violations of privacy, security, and compliance. AvePoint Compliance Guardian provides individualized reports and dashboards surfacing only relevant issues, automatically delegating violations to the right people so they can be addressed quickly.

KEY BENEFITS

DATA DISCOVERY

- Map out data by file type, age, size, owners, file location, and sensitivity level to determine concentration of risk location and violation types
- Identify privacy or information security violations in your files, and assign by role and ownership to establish accountability and visibility
- Generate security-trimmed reports prioritized by criticality and concentration via risk heat mapping so the right people receive the right information, and are able to take action right away

DATA CLASSIFICATION

- Scan enterprise content in real time or on a schedule against out-of-the-box or customized check files based on regulatory and statutory compliance – or your own policies – that include plain text search terms, regular expressions, and report criteria
- Classify content with user-assisted or automated tagging via a Metadata Classification Engine
- Based on content classification, assign permissions; route to the appropriate location; and block, delete, quarantine, encrypt, or redact sensitive data to comply with information governance policies

DATA LOSS PREVENTION

- Evaluate scan images, AutoCAD files, .zip files, and hundreds of other file types for privacy and information security issues
- Provide sophisticated logic to associate a risk score with content using out-of-the-box algorithms
- Tag content with embedded metadata via a Metadata Classification Engine
- Based on content classification, delete, quarantine, encrypt, redact, anonymize, pseudonymize, or route the content to the appropriate location to comply with information governance policies

INCIDENT MANAGEMENT

- Automatically block, quarantine, redact, encrypt, anonymize, pseudonymize and delete files containing sensitive information upon upload or during a recurring or on-demand scan
- Create alerts for the proper user or user groups to verify and confirm the appropriate action to take around incidents
- Role based incident management maps content to roles – such as content creators, owners, compliance and legal teams, or user groups specific to your organization – and automatically sends violations to assigned personnel
- Sort ranked incident reports by a risk scoring system along with visual heat maps of where the highest concentration of violations exist and which ones occur most frequently
- Correctly tag and classify content utilizing human assisted tagging – verified by automated checks – to meet stringent regulations
