Automated, High Performance Web Content Migration to SharePoint

Microsoft SharePoint is rapidly becoming the platform of choice for web content management initiatives. For organizations seeking to unify and streamline their web-based assets, the ability to efficiently and comprehensively migrate legacy HTTP/HTTPS accessible sites, portals and web content into SharePoint is vital.

DocAve Website Migrator provides a reliable, efficient, and cost-effective solution for the organized and lossless transfer of web content into SharePoint. With comprehensive mapping of legacy artifacts to SharePoint elements, fully automated link management, and optional remote migration (leveraging web services), this powerful solution drastically reduces the costs and stress normally associated with web content migration.

DocAve Website Migrator is a complete migration solution, meaning all source code, images, templates, scripts, and documents are transferred, and all links are automatically updated. From a single interface, administrators can easily discover, target, and manage every source element by type, template and hierarchy, and preview the migrated content prior to migration. With such precision control and automated support, organizations can truly align migration operations with business needs.

Business Advantages

- **Centralize Web-based Assets with Precision and Speed**
Reduce management and licensing costs, optimize system resources, and accelerate end-user adoption by unifying all web and portal elements in SharePoint.
- **Transform Static Web Resources into Collaboration-Driven Assets**
Leverage valuable legacy content in your collaborative SharePoint platform to unleash its full web content management capabilities.
- **Business-Driven Deployment via Offline Storage Modes and Reusable Mapping Schemas**
Optionally migrate web-based content to offline local stores to perform full testing prior to production deployment. Save and reuse customized mapping schemas to accelerate migration of multiple pages and sites.
- **Use Existing Infrastructure to Migrate Locally or Into “The Cloud”**
No special hardware is required – install Website Migrator directly on a SharePoint Front End Server, or on any local box in order to migrate web content to your hosted SharePoint environment.

*As with all AvePoint software, the DocAve Software Platform leverages only fully supported Microsoft methodologies and API's.

Website Migrator Features

- Migrate any HTTP/HTTPS accessible web content into SharePoint, including all code, HTML regions, embedded tables, related documents and associated images, granularly or in bulk.
- Preview all migration content, documents, and images prior to migration execution.
- Discover, sort, filter, search, and analyze all source content types, page templates, and site hierarchies via a single interface.
- Fully map all source elements to the existing SharePoint framework using default site hierarchy maps or a customizable mapping interface to utilize SharePoint's Top Link Bars, Quick Launch Bar, Lists, Libraries, and Calendars.
- Automated updates of all page links streamlines management and eliminates risk of human error.
- Create customized, reusable Source-to-SharePoint mapping schemas to streamline migration of multiple pages and sites.
- Migrate source web content to a local offline environment for full testing before migrating to the production environment, then upload migration data to production with a single click.
- Leverage Website Migrator via web services to migrate to SharePoint Online and other hosted SharePoint environments, with no need to install an agent on SharePoint WFE.
- Efficiently transform static websites into collaborative SharePoint portals, to accelerate productivity and advance organizational web content management initiatives.

Supported Environments

Microsoft SharePoint Server 2010

Microsoft SharePoint Foundation

Microsoft Office SharePoint Server 2007

Windows SharePoint Services v3

SharePoint 2007 Online and SharePoint 2010 Online
