

DOCAVE EROOM MIGRATOR

FOR MICROSOFT® SHAREPOINT® MIGRATION

Migrate. Quickly consolidate enterprise content from EMC® Documentum eRoom into Microsoft SharePoint Server and SharePoint Online.

KEY BENEFITS

PRODUCTIVITY
IMPROVEMENT

Reduce content sprawl and improve worker productivity by centralizing eRoom assets into a single SharePoint repository.

BUSINESS
CONTINUITY

Clean up and reorganize eRoom content using customizable content and metadata-based filters, resulting in a clutter-free SharePoint repository that is architected to align with business needs.

FLEXIBLE MIGRATION
AND SCHEDULING

Granular or bulk content migration as well as customizable job scheduling allows administrators to plan migration jobs according to business needs and timetables, reducing any downtime of functioning production environments.

MIGRATION TO SHAREPOINT MADE EASY

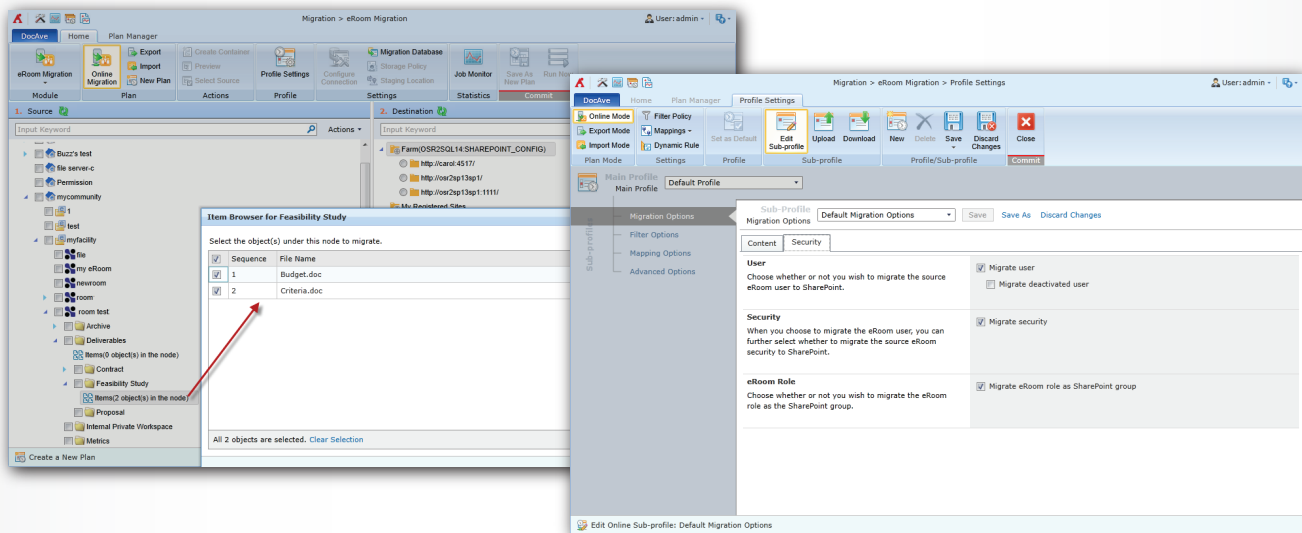

DocAve eRoom Migrator is the market's most efficient and cost-effective solution for the transfer of collaborative workspaces and document libraries from Documentum eRoom to SharePoint Server 2016, SharePoint Server 2013, and SharePoint Online. DocAve allows IT administrators to easily automate the process of consolidating multiple eRoom content sources into SharePoint, thereby maximizing return on investment for legacy content.

TECHNICAL OVERVIEW

- Delegate migration plan management based on administrative roles
- Scan source content prior to migration to identify the scope of migration, and detect any illegal characters, user permissions, user names, user domains, and other eRoom elements that must be mapped in order to migrate successfully into SharePoint Server or SharePoint Online
- Selectively migrate content – including folders, files/items, discussions, notes, links, calendars, dashboard attachments and comments, project plans, polls, databases, inboxes, and site templates – according to business needs with granular content selection as well as customizable filtering options based on content properties, and perform test runs to validate migration plan configuration
- Reorganize folder structures after migrating to the destination libraries and record the source folder paths as column values
- Perform full and subsequent incremental migrations to keep network bandwidth resources optimized, only migrating content that has been updated since the last migration
- Migrate into pre-created sites, or create sites on the fly
- Preserve all metadata – including security settings, attributes, and properties – with full fidelity, utilizing customizable mappings to properly represent eRoom elements and quickly take advantage of SharePoint’s features such as Managed Metadata
- Create dynamic rules based on out-of-the-box interfaces to customize mappings and filter policies in order to meet specific business needs, including the ability to create new Managed Metadata in the destination
- Migrate source metadata as nested terms under the Managed Metadata Service destination based on a user-defined term set path
- Migrate online over existing networks, or offline to securely migrate data across firewalls
- Keep source and destination environments in sync with customizable scheduling to minimize business disruption during the course of the migration project
- Prioritize existing migration plans to ensure projects are executed according to organizational timetables

Point-and-click migration simplifies the transfer of content into SharePoint.
