

DOCAVE EXCHANGE PUBLIC FOLDER MIGRATOR

FOR MICROSOFT® SHAREPOINT® MIGRATION

Migrate. Quickly consolidate enterprise content from Microsoft Exchange Server Public Folders into Microsoft SharePoint Server and SharePoint Online.

KEY BENEFITS

LEGACY ASSET
PROTECTION

Automatically migrate content from source Exchange Public Folders to mapped SharePoint lists and libraries with full fidelity. Protect investments in Exchange Public Folders through lossless migration to SharePoint.

BUSINESS
CONTINUITY

Clean up and reorganize Exchange content using customizable content and file-size filters, resulting in a clutter-free SharePoint repository that is architected to align with business needs. With optimized mapping of Exchange elements to their associated SharePoint artifacts, everything is kept in sync.

FLEXIBLE
MIGRATION AND
SCHEDULING

Granular or bulk content migration as well as customizable job scheduling allows administrators to plan migration jobs according to business needs and timetables, reducing any downtime of functioning production environments.

MIGRATION TO SHAREPOINT MADE EASY

Microsoft Exchange Public Folders have long been a destination for users to share information and often serve as a central repository to store messages, files, calendars, contacts, and more. More recently, however, organizations have begun to search for reliable ways to migrate business-critical content into SharePoint. DocAve Exchange Public Folder Migrator for SharePoint provides an efficient and cost-effective approach to seamlessly migrate from Microsoft Exchange to SharePoint Server 2016, SharePoint Server 2013, and SharePoint Online.

TECHNICAL OVERVIEW

- Offer the option to support both Exchange Public Folders and SharePoint as collaboration options during the transition phase
- Delegate migration plan management based on administrative roles
- Scan source content prior to migration to identify the scope of migration, and detect any illegal characters, user permissions, user names, user domains, as well as other Exchange Public Folder elements that must be mapped in order to migrate successfully into SharePoint Server or SharePoint Online
- Extract data – including calendars, contacts, journals, emails, notes, and tasks – from Exchange Public Folders with all associated metadata and migrate it to its mapped SharePoint objects
- Selectively migrate content according to business needs with granular content selection as well as customizable filtering options based on content properties, and perform test runs to validate migration plan configuration
- Reorganize folder structures after migrating to destination libraries and record source folder paths as column values
- Perform full and subsequent incremental migrations to keep network bandwidth resources optimized, only migrating content that has been updated since the last migration
- Migrate online over existing networks into pre-created sites, or create sites on the fly
- Preserve all metadata – including security settings, attributes, and properties – with full fidelity, utilizing customizable mappings to properly represent legacy elements and quickly take advantage of SharePoint’s features such as Managed Metadata
- Create dynamic rules based on out-of-the-box interfaces to customize mappings and filter policies in order to meet specific business needs, including the ability to create new Managed Metadata in the destination
- Migrate source metadata as nested terms under the Managed Metadata Service destination based on a user-defined term set path
- Prioritize existing migration plans to ensure projects are executed according to organizational timetables

Point-and-click migration simplifies the transfer of content into SharePoint.
