

## AvePoint and Critical Path Training

AvePoint and Critical Path Training, Microsoft® SharePoint® industry's most in-depth training and education services provider, combine to offer the tools, education, and experience required for organizations to harness SharePoint's full potential, enhance productivity, and effectively meet business goals.

- Reduce total cost of ownership (TCO) and vastly increase operational efficiency by enhancing IT administrator, developer, and information worker skillsets
- Utilize Microsoft SharePoint MVPs, industry thought leaders, and more than a decade of unparalleled experience to define, design, and implement comprehensive SharePoint infrastructure and governance planning
- Simplify implementation, management, and enforcement of SharePoint governance policies while enabling centralized or delegated infrastructure management of SharePoint farms

### Business Needs

In order to gain the most value from SharePoint deployments, organizations must be able to establish effective requirements to implement and deliver solutions while accounting for how SharePoint solutions will be managed. Without a proper understanding of SharePoint's capabilities, and how to extend those capabilities, the solutions available to business owners are limited. A proper SharePoint education can help developers, IT Pros, and information workers work more efficiently and improve their skillsets to better manage SharePoint assets.

Organizations can further optimize SharePoint investments by extending the toolset available to developers, IT Pros, and information workers, which can help automate otherwise manual processes and simplify tedious tasks such as deploying customizations from one environment to the next, or implementing sweeping configuration or permission settings changes. Ultimately, a quality education and training regime – paired with comprehensive management solutions – can equip developers, administrators, and information workers to better implement, manage, and optimize SharePoint solutions in order to extend SharePoint's possibilities for your organization.

### Challenges

SharePoint is a platform that covers a breadth of capabilities, all of which can be extended to help organizations satisfy their dynamic business and technical needs. As such, it is extremely difficult for any one person or team to possess all the knowledge around SharePoint features and functionality necessary to extend SharePoint's capabilities with custom coding. For organizations wanting to achieve the highest level of user adoption and ensure that SharePoint's maximum value is delivered, organizations must find ways to:

- Deliver a cost-effective, formal training solution with specific target goals that reflect SharePoint performance, adoption, and service improvement priorities
- Conduct complementary training for SharePoint administrators, developers, and power users to enhance service, operations, and processes for continuous improvement
- Develop a sound governance plan and quickly deploy governance policies across all SharePoint assets
- Ensure global users are provided with a high quality of service and high-performance global collaboration

### The AvePoint and Critical Path Training Difference

AvePoint and Critical Path Training have teamed up offer a comprehensive solution to ensure that the full benefits of SharePoint are achieved. Combining the leader in enterprise-class governance and infrastructure management solutions with the industry's most in-depth training and education services provider, AvePoint and Critical Path Training provide the tools, education, and experience required to unleash SharePoint's full platform maximum value while achieving timely return on investment (ROI).

- World-class SharePoint Education: Critical Path Training's mission is to provide professional developers, designers, IT professionals, and information workers with an objective viewpoint and key insights about SharePoint architecture, as well as best practices and essential coding techniques to ensure organizational success with SharePoint deployments.
- Enterprise-Class Governance & Infrastructure Management Platform: AvePoint's DocAve Software Platform addresses the need for fast, flexible, and real-time data protection, administration, compliance, migration, reporting, and storage optimization support for your Microsoft SharePoint deployments. With DocAve you can protect, manage, and optimize individual SharePoint farms or multiple farms from a single, user friendly, web-based console.
- Experienced & Specialized: Together, AvePoint and Critical Path Training utilize the experience and expertise gathered from working with thousands of organizations worldwide since SharePoint's first days as Tahoe to ensure successful SharePoint implementations.

## Critical Path Training Offered

Education Opportunity	Course Name	Description
Developer Courses	GSA2010: The Great SharePoint Adventure 2010	Deep-dive, hands-on class covering all of SharePoint Server 2010 for developers.
