AvePoint Compliance Guardian
For Microsoft SharePoint

On Point. Out-of-the Box

Make your Microsoft® SharePoint® environment like Dropbox, Google Drive, and even Microsoft 365 by enabling two-way collaboration and external sharing without exiting SharePoint.

SharePoint Secure Share

Enable two-way collaboration and external sharing directly from on-premises SharePoint and Microsoft 365. Without ever having to download and re-upload content, external users can edit and sync changes back to your environment from Office on mobile devices and desktop browsers.
SharePoint Productivity

Eliminate the need for multiple sharing systems by giving end users the power to collaborate and increase productivity. Without slowing down to use multiple sharing platforms, SharePoint becomes the single point of access for all your organization's content.

Secure Collaboration

By combining a secure container with the familiar interface of Office, Perimeter exposes only the content that is allowed for external sharing according to the rules you set and based on document meta tags.

Secure Remote & Mobile Access

Empower a mobile workforce with secure remote access to SharePoint content and editing capabilities through a secure container on personal devices – anywhere, anytime. Perimeter Mobile App is available on Windows, iTunes, and Google Play app stores.

SharePoint Secure Share

AvePoint Perimeter extends the collaboration power of on-premises SharePoint and Microsoft 365, increasing user productivity by allowing them to work with anyone from a single content repository. Best of all, you maintain security over the content with robust administrator options.

SHAREPOINT SECURE FILE SHARE

- Securely collaborate with external partners directly from on-premises and online SharePoint by extending view, secure edit, delete or download rights. Share content at the library, folder, or document level.

- Set file or library share duration with auto expiration. Share with external users with a variety of access levels, including read-only, download, delete or secure-edit using Office.

- Allow remote or external collaborators to edit or comment on shared content within Office on mobile devices and desktop browsers, all without publicly exposing SharePoint content.

- Extend upload rights to external collaborators, allowing uploads of edited or net new files directly into your Perimeter-enabled libraries.

- Create and manage user- and group-based rules to restrict external sharing options for internal users, as well as define what permissions a user or group can grant when external-ly collaborating.

- Create rules that enable or disable external sharing based on document metadata such as file name, file type, and tags for all Perimeter-enabled libraries.

- Multiple options for sharing files including anonymous access, one-time passcode or by requiring registration and sign-in.

SHAREPOINT ACCESS MANAGEMENT

- Centralize control for AvePoint Perimeter administrators to define where and how sensitive documents are viewed or accessed.

- Easily manage external user accounts and define password requirements for accessing the external portal within the AvePoint Perimeter Manager.

- Track, monitor, and get alerts on suspicious content access – including irregular access, download, or sharing behaviors – for all content residing in AvePoint Perimeter's secure container.

- Generate and export granular, customizable reports of SharePoint activity, including content access, sharing, and downloads.

ADDITIONAL INTERNAL PRODUCTIVITY FEATURES

- Authenticate users with a single-use, limited-time-access passcode or by scanning a QR code with the AvePoint Perimeter application.

- Enhance security by configuring two-factor authentication for external users.

- Add additional access controls and enhance security to any Active Directory Federation Services (ADFS) capable application – including Microsoft 365™, Microsoft® Dynamics CRM Online, Microsoft® Dynamics ERP Online, as well as the Windows Azure management console – by deploying AvePoint Perimeter as part of an ADFS installation.

- Restrict access to remote SharePoint content via AvePoint Perimeter application's multi-factor authentication.

- Remotely wipe all stored or cached documents and data – as well as all user activity performed within the application – in the event of a breach, loss of device, or employee turnover.

NON-SHAREPOINT SECURE FILE SHARE

- Users can upload files directly to Perimeter's "My Drive" to share with external parties. Perfect for those seeking a secure, on-premises alternative to cloud-based file sharing solutions.

SUPPORTED TECHNOLOGIES

- Supports on-premises versions of Microsoft SharePoint 2019, 2016, 2013, and 2010, SharePoint Online, OneDrive for Business, as well as Microsoft Project 2013 and 2010.

- Remotely access SharePoint through the following supported browsers: Internet Explorer®, Edge, Chrome™, Safari, and Firefox®.

- Remotely access SharePoint through the following supported mobile devices: iPad, iPhone, iPod Touch (iOS 5 and newer versions), Android™ platform (Gingerbread 2.3 and newer versions), and Windows Phone.
