AvePoint®
DocAve® Online
Protecting Your Microsoft Office 365 Assets

Event:

Bob and his teammates are working within an Office 365 project site.

Bob discovers that the contract proposal he has spent hours on is corrupt.

Step 1

Bob asks Ernie, his IT administrator, if he can restore his proposal.

Ernie knows that native capabilities only allow for restoring at the site level.

Step 2

Ernie logs into DocAve Online.

Luckily, the project site falls within the organization's High Business Importance (HBI) governance policies, which call for DocAve Online to back up the site every 30 minutes.

Step 3

Using DocAve Online, Ernie granularly restores Bob's document from Windows Azure, avoiding a full site restore and a team-wide setback.

End Result

Bob & Team
Neither Bob nor his team members lost any of their work.

Governance Board
Business-critical assets were protected according to predefined governance policies.

IT Administrators
Saved Ernie time and resources with automatic backups and granular level restorations.
